

Rule Of Thumb

Combustion engines need to be maintained to function properly. Have your back up generator inspected at least once a year.

Annual Maintenance Check Up

Maintain your generator with an annual inspection for seamless operation you can depend on.

Your annual check up includes all core functions: full oil change, oil filter change, and outage replication, including transfer tests:

Automatic Transfer Switch Condition

Automatic Transfer Switch Transfer Mechanism

Automatic Transfer Switch Generator Breaker On

Automatic Transfer Switch Contact Assembly

Automatic Transfer Switch Tested Er Load Transfer

Semi-Annual Check Ups

Many customers tell us they find having their back up system checked twice a year gives them a complete piece of mind for weathering any power challenge no matter the season.

Semi-Annual check ups provide an operation test, fluid top off, as appropriate, and general maintenance of the unit, including a quick check of all key items shown below:

Cold Oil Test	Fuel Line	Oil Hose	System Leaks
Oil Filter	Battery Load Test	Radiator Fluid	Record Engine Hours
Oil Hose Clamps	Body Plugs	Spark Plug Gap	Record Gas Meter Size
Breaker Off/Fuse Removal	Air Filter	Exhaust Line	Record Battery Age
Radiator Hoses	Engine Oil	Charger Output Voltage	Reset Maintenance Meter
